OTTENBY FÅGELSTATION

Sörgärdet:

Vitkindad gås 70 (MGA, ALD)

DIVERSE:

STTG: This morning on a quiet round a goshawk was seen in the net! And much to our surprise we managed to get to it before it got out despite its big size. What a cool bird!

AND: Ducktrap continues to catch many ducks. Today 5 new mallards and 1 teal was ringed. The teal was a male and had almost completely gotten its breeding plumage so that was particularly nice. Also 37 ducks were controlled, one of them which was ringed last year.

Div: ESR's family came and made lovely dinner for the whole station. Duck data samples are finally entered and double checked, which might have taken a bit longer time to finish than either MGA or ALD was expecting or very happy about. Happy halloween! We forgot to carve pumpkins today but we will do so tomorrow instead. KWL and CJT rearrived, and Arvid and Frida came to visit for a few days. In the afternoon FOG caught four jack snipes (one control), out of which one which weight 40 grams more than another one, despite both being quite fat! In fact, one weighed the most out of any other jack snipe caught at the station: just over 100g! The eveing also gave some nice birds cause FOG, ALD and MRO were out nightcatching! They caught one common snipe and two woodlarks. The woodlarks were dangerously cute and strikingly beautiful. This was a day record, and we now also broke the year record (4 trapped this year)! FOG also caught a fantastic grey plover.
