Havsörn 4, vinterhämling 3, snösparv 8 (FOG)

Gräsand 4

Totalt 4 individer av 1 art.

Ringmärkare: JMS, FOG, ALD, MGA, KWL.

DIVERSE:

AND: It's the last day of the ducktrap unfortunately! We realised that the next week or so it will be extremely windy which makes it very inconvenient to take down the ducktrap, so we will take it down tomorrow already, since its very little wind.

We had 4 new mallards and 41 controls. We will miss them very much!

In total, 596 birds of 11 species were ringed at the ducktrap this year, plus 2488 controls processed. In terms of sampling, this is a whopping 7703 bird-flu samples, as well as 130 birds x-rayed and 11 found with pellets. The highlights include a garganey, a coot, 2 grey herons, 3 wigeons, 49 teal, 3 gadwalls, 2 greylag geese, 2 black-headed gulls, a hooded crow and a new taxa for the station: a mallard x gadwall hybrid!

Div: Lots of computer work today and some cleaning. Later at night we had hot chocolate to celebrate the end of 2024 ducktrapping and brace ourselves for taking down the ducktrap tomorrow.
